

REASONS TO CONSIDER

Diversified Exposure

Exposure to a liquid, well-diversified basket of hard and soft commodities which are significant to the world economy and have low correlations with other major asset classes.

Natural Inflation Hedge

Commodities are major consumer price index (CPI) constituents and therefore act as a natural hedge against inflation.

Tactical Allocation

A high conviction vehicle to execute views on commodity cycles.

*Returns are in Australian dollar terms. Returns for periods greater than one year are annualised. Fund inception 3rd July 2023. Note that index returns shown are 'excess return', meaning the index tracks only the underlying future contracts within the index without taking into consideration any interest component earned from cash and/or money market instruments. The fund returns shown are 'excess return' plus interest earned from exposure to cash and/or money market instruments. Bloomberg Commodity Index Excess Return 3 Month Forward returns are theoretical and do not include the impact of fees or costs of investing. Past performance is not a reliable indicator of future performance.

INDEX DESCRIPTION

The Bloomberg Commodity Index Excess Return 3-Month Forward is comprised of up to 25 commodities futures contracts covering the livestock, energy, softs, grains, industrial metals and precious metals sectors. The index uses five-year average liquidity and production data to determine the commodities selected and their relative weights. Futures' positions are weighted two-thirds by trading volume and one-third by worldwide production. The index rebalances each January with weight caps applied at both the commodity and sector levels. A cap and floor are applied to every commodity, limiting their weights to a maximum of 25% and a minimum of 2% at each rebalance. Sectors are capped at 33%. The index uses three-month forward futures contracts, which includes commodity futures with expiry dates of at least three months.
