

REASONS TO CONSIDER

High Growth Potential

The global robotics market was valued at more than USD\$23bn in 2020, with forecasts suggesting it could nearly triple to USD\$74bn by 2026.¹

Compelling Economics

The average cost of an industrial robot declined from USD\$46k in 2010 to just USD\$27k in 2017 – and is forecasted to dip below USD\$11k by 2025 as technology improves and scales, allowing for broader adoption across industries.²

Unconstrained Approach

Robotics & automation have wide-reaching application, extending far beyond industrial activity. ROBO invests accordingly, with global exposure across multiple sectors and industries.

INDEX DESCRIPTION

The ROBO Global[®] Robotics and Automation Index is the first index to provide investors with a comprehensive, transparent and diversified benchmark that represents the global value chain of robotics, automation and artificial intelligence (RAAI) related companies.

The index is weighted in proportion to each company's ROBO score. The ROBO score is a score between 1 to 100 that is based of the following:

- The level of revenue a company makes from robotics and automation activities,
- The level of investment a company makes in robotics and automation, and
- The extent the company has market and technology leadership in the robotics and automation universe.

A score of 50 or higher means the company is eligible for inclusion in the ROBO Global Robotics and Automation Index. Companies in the index are weighted according to the ROBO score divided by the sum of all constituents' ROBO scores.

PORTFOLIO STATISTICS
